A UNIFIED **MARITIME** OPERATIONAL PLATFORM

Bringing connectivity, vessel operations, tracking, visibility, crew services, and support together in **ONE CONNECTED** environment.

Why Xpert One?

More Systems and Data But No Shared Operational Picture of Modern vessels generate information across multiple systems from connectivity and vessel management to tracking, CCTV, crew services, and technical support.

However, when these systems operate separately, fleet operators may still lack a clear and shared view of what is happening across their vessels.

Xpert One brings these operational elements together creating a more connected, visible, and manageable fleet environment.

What is Xpert One?

Xpert One is a unified maritime operational platform designed to connect vessel systems, operational information, crew services, and shore-based support within one integrated environment.

Xpert One helps organizations move from managing individual systems toward building a shared operational view across the fleet.

One Connected Platform for Modern Fleet Operations

Xpert One brings essential maritime operational capabilities into one connected ecosystem supporting vessels, crews, shore teams, and management.

CONNECTIVITY STATUS

Monitor vessel connectivity status and improve visibility of communication services across the fleet.

F.R.I.D.A.Y. MARITIME ERP

Manage vessel operations through integrated functions covering purchasing, inventory, maintenance, safety, and crew management.

XPERT LOC

Monitor vessel locations through centralized positioning and voyage information, with future capabilities to track crew and critical onboard assets.

XpertLoc is designed to improve fleet visibility, personnel awareness, asset traceability, and coordination between vessels and shore-based teams.

MARITIME CCTV

Enhance onboard visibility through maritime surveillance, remote monitoring, and event-based operational awareness. Transform conventional onboard CCTV into an intelligent maritime surveillance capability.

By combining remote monitoring with AI-assisted video analytics, the system can detect predefined events, identify potential operational risks, and deliver timely alerts to vessel and shore-based teams.

HI CREW

Provide controlled and manageable onboard internet services for seafarers while supporting crew welfare and connectivity management.

SUPPORT CENTER

Connect vessel and shore teams with technical support, service-ticket visibility, and 24/7 operational assistance.
